

Steripure 35%

Hydrogen Peroxide has many uses as an oxidiser, sanitiser and bleach. It is extremely versatile for use in water treatment, gardening, household cleaning as well as many more.

ALWAYS WEAR EYE PROTECTION WHEN HANDLING HYDROGEN PEROXIDE

DIRECTIONS FOR DILUTION:

- **1% Hydrogen Peroxide**
To make 1L (1000mL) – measure 29mL of Steripure 35%, then top up with water (preferably distilled/deionised pure water) to 1000mL
- **3% Hydrogen Peroxide**
To make 1L (1000mL) – measure 86mL of Steripure 35%, then top up with water (preferably distilled/deionised pure water) to 1000mL
- **6% Hydrogen Peroxide**
To make 1L (1000mL) – measure 171mL of Steripure 35%, then top up with water (preferably distilled/deionised pure water) to 1000mL

WATER DISINFECTION & DEODORIZATION:

Steripure is an effective liquid disinfection suitable for potable water. Unlike chlorine it has no taste or odour of its own, so is ideal for the disinfection of water tanks and piping. It is also suitable for one-off disinfection or deodorization of water in the tank. Sediment in the tank may need to be removed first. Steripure can be added directly to the tank, electricity is not required.

- Regular Dose: add 450mL Steripure 35% per 10,000L of water
- Shock Dose: add 900mL Steripure 35% per 10,000L of water

HAZARDOUS SUBSTANCE:

35 - 37% w/w Hydrogen Peroxide
